

Reasonable and Sustainable

Gabletop packaging is a type of packaging commonly used for milk, juice, and other liquid food products, characterized by a roof-shaped top. This design not only provides a practical pouring spout but also seals the product airtight. Gabletop packaging is known for being easy to carry, having a long shelf life, and being recyclable. Widely used in the liquid food sector, this packaging is typically made from cardboard and is often lined with a polyethylene coating to make it liquid-proof. The "gable" part at the top of the packaging can be opened and resealed, providing convenience to consumers.

Gable top cartons offer several advantages for packaging beverages:

1. **Freshness and Protection:** The design and materials used in gable top cartons help protect the contents from light, air, and contaminants, keeping beverages fresh for longer periods. 2. **Ease of Use:** The gable top design makes these cartons easy to open, pour from, and reseal, providing convenience for consumers. 3. **Sustainability:** Made primarily from renewable resources like paperboard, gable top cartons are often recyclable and can be produced with environmentally friendly materials, reducing their environmental impact. 4. **Versatility:** They can be used for a wide range of beverages, including milk, juice, cream, and even some non-liquid products. They come in various sizes to suit different needs. 5. **Branding Opportunities:** The large surface area of the carton provides sample space for branding and product information, allowing for attractive and informative packaging. 6. **Lightweight and Stackable:** Gable top cartons are lightweight and can be easily stacked, making them efficient for storage and transportation. 7. **Cost-Effective:** The materials and manufacturing processes for gable top cartons are generally cost-effective, making them an economical choice for beverage packaging.

These advantages make gable top cartons a popular choice for many beverage producers. Is there a specific type of beverage or packaging feature you're particularly interested in?

Environmental Responsibility:
Sustainable and eco-friendly packaging options.

Innovative Technology:
Packaging produced with the latest technology.

Quality and Reliability:
High-quality materials and reliable aseptic packaging solutions.

We have been producing packaging materials since 1980 and with its qualified and innovative manufacturing approach, company

develops efficient and accurate solutions and goes beyond the expectations of customers. Poşetsan delivers the best of products and service to local and global markets as well in its factory that includes 27.500 m² open, 22.000 m² closed area and 240 employees. Our registered office is at Levent Istanbul and we deliver service beyond our borders via our experienced sales team. Poşetsan monitors developments in the sector as well as pioneering the innovations with its experienced engineers, technical and administrative staff.

Poşetsan, which considers every activity as a project, also underlines special packaging materials for the needs of its customers.

MATERIALS

Paper/Cardboard:

Structural strength and printing surface.

Polyethylene (PE):

Used on internal and external surfaces, provides impermeability.

GABLE TOP

Product Features :

- ✓ **Convenience**
Easy Opening and Resealing: The resealable gable design allows for easy pouring and the ability to close the package again, preventing spills.
Portability: Its lightweight structure makes it easy to carry, offering convenience to consumers.
- ✓ **Durability**
Liquid Resistance: The polyethylene coating makes the packaging liquid-proof, protecting the product from external factors.
Extended Shelf Life: It protects the product from air and moisture, extending its shelf life.
- ✓ **Environmental Friendliness**
Recyclability: Made from cardboard, which is recyclable and an environmentally friendly packaging option.
Reduced Carbon Footprint: Requires less raw material and energy compared to other packaging types, reducing the carbon footprint.
- ✓ **Production Efficiency**
Cost Effectiveness: Suitable for mass production and made from cost-effective materials, providing an economical solution for manufacturers.
Flexibility: Can be produced in various sizes and shapes, making it suitable for different product types.
- ✓ **Safety**
Sterilization Compatibility: Suitable for aseptic filling, ensuring safe packaging for sensitive products like milk and juice.
Robust Structure: The sturdy design helps prevent damage during transport and storage.
- ✓ **Consumer Appeal**
Brand Viability: Allows for easy printing, making it an effective tool for brand promotion.
Aesthetic Appearance: Offers an attractive and eye-catching look on shelves.
These advantages make gabletop packaging a preferred option for both manufacturers and consumers.
